HOW TO MOP

MOUSECLEANING GUIDE TO A PERFECT MOPPING TECHNIQUE

Hmm...

Dirty mop=Dirty floor, Cyril!

HERES HOW TO MOP FOR THE PERFECT FLOOR

Keep that bucket out of the way of the area you are working in.

Apply the detergent solution lightly all over the floor,
and leave to work until the dirt starts lifting of the floor.

As you work keep on wringing out the mop so you don't use too much solution and get the floor too wet.

See, a clean damp mop!

But detergent and soiling are still on the floor!

Wash out your mop in clean water

Rinse the floor off with clean water (oops! Not like this!)

Wring out your mop frequently to pick up excess water,
and all that dirt that is still lying around.

The more you rinse, and the more you change your
washing solution and rinsing water the less likely the
floor will smear

And there you have it!
